

REVOLUTIONIZE ASSESSMENT AND CASE MANAGEMENT WITH **GEARS**

GEARS is an advanced cloud-based assessment and case management platform that streamlines the risk management process. **GEARS** was developed for enterprise use by state agencies, institutions, clinics, and private practices.

As a core solution workflow, **GEARS** connects risk assessment to configurable treatment and intervention outcomes. In doing so, **GEARS** helps organizations advance equity and increases systemic efficiency for everyone impacted by the justice system.

WHO CAN USE GEARS?

This cloud-based digital risk assessment platform offers a streamlined solution that allows users to administer tools and assessments electronically in one convenient place. **GEARS** is CJIS, HIPPA, ISO, PCI and SOC 2 compliant and available to any organization or client who needs a portal to house assessment and case management data.

WHY USE GEARS IN YOUR ORGANIZATION?

Managing client data has never been easier

Assessments are administered and automatically scored using one user-friendly platform. Client data can be shared across users or institutions for seamless collaboration. GEARS is compatible with Android and iOS tablets, allowing you to conduct assessments wherever needed.

Supports algorithmic transparency

Real time risk calculator increases assessment transparency and the evaluator's understanding of assessment results.

Deliver personalized, insightful reports to your clients with ease

GEARS automatically generates a brief and extended report for each client, complete with easy-to-understand visual representations of their results. Choose what information to include with customizable reports, tailoring each report to your client's unique needs. Take the guesswork out of report generation and gain more time to focus on what really matters – efficiently providing the best outcomes for clients.

User-friendly guidance tools

The "Item Wizard" prompts users with questions to guide them through the assessment process. The "Item Notes" option allows users to add relevant notes to each question. And if you need to reference the coding manual, the "Scoring Guide Quick Link" will take you directly to the specific items you need. These features support consistent scoring between raters.

Highly configurable features

GEARS is an off-the-shelf platform that can be easily configured to align with local practices. Customizing fields and menus allow users to ensure that the platform works seamlessly with existing workflows.

Streamline risk management with a unified system

The GEARS platform provides risk assessment and case management tools in a single, unified system. Combining these two functions allows users to determine risk effectively and manage cases using a single application.

Streamline intervention recommendations

Administrators and users with case management permission can create customized interventions and goals based on assessment results by setting pre-populated rules. Simplify the intervention recommendation process and ensuring similar risk profiles receive similar interventions and reducing the administrative burden on the case worker.
